V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-9	YES
	Claims		NO
Inventive step (IS)	Claims	1-9	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-9	YES
	Claims		NO

2. Citations and explanations

Document 1: EP 745612 A1

Document 2: M. R. Tarar *et al.*, "Expression of human cytomegalovirus gp58 antigenic domain fused to the hepatitis B virus nucleocapsid protein", *FEMS Immunology and Medical Microbiology*, 1996, Vol. 16, no. 3-4, pp. 183-192

Document 1 discloses anti-idiotypic antibodies which induce an immune response to an epidermal cell growth factor receptor (EGFR) expressed specifically in tumour cells, and a method for preparing these antibodies.

Document 2 discloses the preparation of an antigen formed by the fusion of two peptides, wherein the antigen comprises hepatitis B virus core protein (HBcAg) bound to a human cytomegalovirus (HCMV) antigen epitope.

However, from documents 1 and 2 a person skilled in the art could not easily deduce a fused antigen in which the epitope of a first antigen recognized by a first antibody is bound with the antigen for a second antibody.

Therefore, the inventions set forth in claims 1-9 are novel, involve an inventive step and are industrially applicable.
